Letter from the Attorney General

When I was sworn in as Attorney General in January of 2019, one of my first priorities was to address the staggering backlog of untested sexual assault kits that had been sitting on shelves, gathering dust, in law enforcement agencies, hospitals, and ancillary organizations across the state of Missouri.

One of my first actions as Attorney General was to launch the SAFE Kit Initiative and appoint seasoned Judge M. Keithley Williams, to spearhead the initiative. The aim of the initiative has always been to completely clear of the backlog of untested, reported sexual assault kits, and more importantly, to obtain justice for victims of these heinous, unimaginable crimes. Since the launch of the SAFE Kit Initiative, my Office has always placed the utmost importance on ensuring our efforts are victim centric. The courage it takes to come forward, report a crime of this nature, and submit a sexual assault kit is nothing short of astonishing. My staff and I have always kept that courage at the front of our minds as we undertake this important work.

Since the launch of the SAFE Kit Initiative and the completion of the first inventory of kits in 2018, the Attorney General's Office has made incredible strides in our goal to clear the backlog. Out of the 599 reporting law enforcement agencies, 493 – or 82.3% - of those law enforcement agencies report no backlog of untested, reported kits. Thanks to state and federal funding sources, the SAFE Kit Initiative has tested 3,478 reported kits, which is roughly 70% of the untested, reported kits identified by the 2018 and 2020 inventories. Thanks to help from our partners at the Missouri State Highway Patrol and others, uploading DNA profiles from tested kits into the Combined DNA Index System, or CODIS, has already resulted in one conviction, with four cases set for trial and two investigations nearing completion.

To satisfy the requirements of the 2020 grant the Office received from the Bureau of Justice Assistance (BJA), Judge Williams and her team were required to complete a second inventory, which examined the number of untested sexual kits from April 30, 2018, to April 16, 2020, and partially or previously tested kits from 1998 to present. This inventory uncovered an additional 1,536 untested, reported sexual assault kits, 769 untested, unreported kits, and several thousand previously and partially tested kits. Now that the second inventory is finished, the Office can resume shipping and testing using funds from that 2020 BJA grant, and the Office estimates that roughly 1,000 kits can be shipped and tested using that funding soon.

While we have made great strides in working to obtain justice for victims and clear the backlog, there is still work to be done. My Office will not rest until that backlog is cleared, the courage of those victims is vindicated in full, and offenders are brought out of the shadows of darkness and off of the streets.

Eric S. Schmitt
Missouri Attorney General

SAFE Kit Fast Facts

The Sexual Assault Kit Initiative (SAKI) is a nationwide undertaking funded by the Bureau of Justice Assistance (BJA) at the United States Department of Justice (DOJ) that began in 2015. This initiative helps state and local jurisdictions across the country inventory and test sexual assault forensic evidence (SAFE) kits.

The SAFE Kit Initiative 2020 Inventory included responses from 126 healthcare providers and 599 law enforcement agencies.

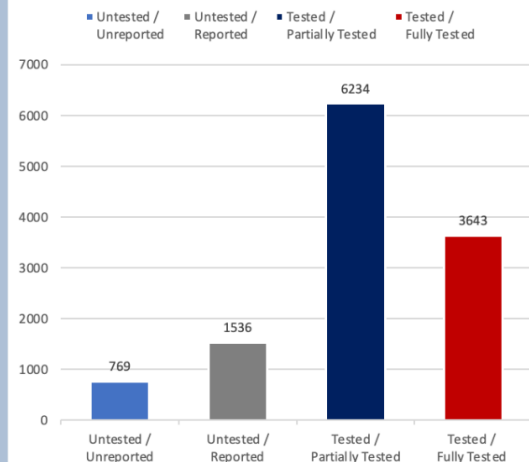

126 HEALTHCARE PROVIDERS

599 LAW ENFORCEMENT AGENCIES

The breakdown of SAFE kits by type in law enforcement agencies is:

- 769 untested, unreported kits
- 1,536 untested, reported kits
- 6,234 partially tested kits
- 3,643 fully tested kits

2020 Testing Status

82.3% OF MISSOURI LAW ENFORCEMENT AGENCIES REPORT NO SAFE KIT BACKLOG

SAFE Kit Fast Facts

78% DROP IN NUMBER OF SAFE KITS
HELD BY HOSPITALS AND HEALTHCARE
STATEWIDE

70% OF THE STATEWIDE REPORTED,
UNTESTED SAFE KITS HAVE BEEN TESTED

CODIS HITS:

CODIS, or Combined DNA Index System, is the FBI's database for DNA profiles of criminal offenders. When DNA profiles are uploaded to CODIS, the system tracks for "hits," looking to see if that DNA profile matches that of a previous offender that's already been uploaded into the system.

- 249 CODIS Hits obtained from the 2018 SAFE Kit Initiative Inventory
- 5 CODIS Hits obtained from the 2020 SAFE Kit Initiative Inventory

Since the beginning of the SAFE Kit Initiative in Missouri, the AGO has received the following testing results from the kits tested:

- **38% are CODIS Upload Eligible** That means that there is a strong enough DNA profile to be eligible for upload into CODIS.
- **27% are Not CODIS Eligible** This is because either the DNA profiles are associated with the victim or consensual partners, or the DNA profile returned with inconclusive results that do not meet the Federal Bureau of Investigation's (FBI) eligibility standards for CODIS uploads.
- **35% are Negative**, which means that no DNA was found.

Background

The Sexual Assault Kit Initiative (SAKI) is a nationwide undertaking funded by the Bureau of Justice Assistance (BJA) at the United States Department of Justice (DOJ) that began in 2015. This initiative helps state and local jurisdictions across the country inventory and test sexual assault forensic evidence (SAFE) kits, upload eligible offender DNA profiles into a national database, investigate and prosecute cases in which offender DNA profiles match, or “hit,” against existing records in the database, and develop procedural and evidence tracking capacity to prevent future backlogs. Nationwide, since 2015 to March 2022, the SAKI program has inventoried 146,278 SAFE kits, sent 83,201 kits for testing, with 13,961 resulting Combined DNA Index System (CODIS) hits¹ within 76 jurisdictions. Missouri’s SAFE Kit Initiative within the Missouri Attorney General’s Office (AGO) is one of the 26 statewide sites² funded by the federal SAKI grant. The term SAKI refers to the federal grant program and the term SAFE Kit Initiative refers to the Missouri AGO’s statewide program to eliminate the backlog of sexual assault kits.

In 2018, fueled by the number of untested sexual assault kits reported in an informal survey of law enforcement agencies and hospitals, the AGO and the Missouri General Assembly took definitive action to address the statewide backlog of untested sexual assault kits.

In 2018 the Missouri General Assembly passed House Bill (HB) 1355, an omnibus criminal justice bill that included language on SAFE kit processing. HB 1355’s amendment of section 595.220, RSMo. was the first statutory language governing the processing of SAFE kits in Missouri and provided much needed standardization in testing timelines and retention schedules.

Missouri law § 595.220, RSMo. requires that:

- Healthcare providers electronically notify law enforcement of a reported or anonymous SAFE kit upon evidence collection with law enforcement pickup within 14 days,
- Law enforcement submit a reported or anonymous SAFE kit for DNA testing within 14 days of receipt from healthcare provider,
- Law enforcement retain reported and anonymous SAFE kits for 30 years or until case adjudication,
- The AGO develop a statewide ETS that allows organization and victims to track SAFE kits from evidence collection through case adjudication or destruction,
- The Department of Public Safety (DPS) develop forms and procedures for gathering, transmitting, and storing SAFE kits throughout their lifecycle.

Since April 2018 the AGO applied for and received two separate three-year SAKI grants from BJA. The AGO SAFE Kit Initiative team currently implements a 2018 SAKI Grant and a 2020 SAKI Grant. Major elements of the two AGO’s SAKI grants include the:

¹ Bureau of Justice Assistance, 2022

² RTI Sexual Assault Kit Initiative (SAKI) Training and Technical Assistance (TTA), 2022

- **Creation of a Multi-Disciplinary Working Group:** The processing of a SAFE kit and the investigation and prosecution of the related sexual assault involves a multitude of stakeholders and practitioners. To ensure a holistic approach to Missouri’s SAFE Kit Initiative, the AGO has formed a multi-disciplinary working group (MDWG) made up of law enforcement, forensic laboratory staff, prosecutors, healthcare providers, and victim advocates. The MDWG first met in October 2018 and continues to provide invaluable guidance and perspective to the AGO as the initiative progresses.
- **Sexual Assault Kit Initiative Statewide Coordinator:** The day-to-day operations of the AGO SAFE Kit Initiative is managed by an experienced leader to ensure seamless statewide coordination on efforts between staff and stakeholders.
- **Completion of a Statewide Inventory of SAFE Kits:** The most pressing issue facing the SAFE Kits Initiative is the backlog of untested SAFE kits across Missouri. The first major step of the initiative has been conducting a detailed inventory of all organizations in Missouri that may possess SAFE kits. The 2018 SAKI inventory covers untested kits collected prior to April 30, 2018 as well as tested kits collected on or before December 31, 1997. The 2020 SAKI inventory covers untested kits collected prior to April 16, 2020 as well as tested kits collected January 1, 1998 or after. (See 2020 “Inventory Scope” insert on page 11). This includes law enforcement agencies and healthcare providers as well as ancillary organizations such as rape crisis centers and prisons. In accordance with BJA requirements, the AGO maintains the 2018 inventory and 2020 inventory results separately for grant reporting purposes. The AGO previously released the 2018 SAFE Kits Initiative Inventory Report on November 20, 2019. This report describes the [2020 SAKI Grant inventory findings](#).
- **Testing of Inventoried SAFE Kits:** Backlogged SAFE kits discovered by the inventory will be tested with the assistance of contracted private DNA testing providers to prevent backlogged kits from overwhelming the Missouri State Highway Patrol (MSHP) crime lab’s processing of contemporary (current) kits.
- **Upload of Eligible DNA Results to CODIS:** As SAFE kits are tested, results that satisfy eligibility criteria will be uploaded to the Combined DNA Index System (CODIS). CODIS is a national database of DNA profiles from both known and unknown offenders and arrestees. As DNA profiles are uploaded, they are compared against existing records for matches, or “hits,” which are used to connect cases and identify perpetrators.³ As SAFE kits from the inventory are tested, eligible results will be uploaded to CODIS to further investigations.
- **Upload of Case Information to ViCAP:** Eligible cases handled as part of the SAFE Kits Initiative will be entered into the Federal Bureau of Investigation’s (FBI’s) Violent Criminal Apprehension Program (ViCAP) database. ViCAP is a national repository for comprehensive case information for violent crimes such as homicides, sexual assaults, missing persons, and unidentified human remains. ViCAP aids law enforcement in connecting cases across jurisdictional boundaries through offender behavior or modus operandi (MO) and related details in cases rather than DNA.

³ Federal Bureau of Investigation, 2019

- **Assistance of Investigations and Prosecutions of CODIS Hits:** CODIS hits will be used to develop investigative leads that will be provided to the detectives of the local jurisdiction from which the SAFE kit originates. The AGO will provide investigatory and prosecutorial assistance to local jurisdictions as requested to ensure that offenders are brought to justice. The 2020 SAKI Grant provides funding for a dedicated AGO cold case investigator.
- **Development of a Statewide Evidence Tracking System:** (2018 SAKI Grant) To prevent a backlog of SAFE kits from developing in the future, the AGO has developed an evidence tracking system (ETS) that will track SAFE kits from production through case adjudication as it moves between organizations during the process. The ETS will provide local jurisdictions a free tool for complete awareness of the status and location of relevant SAFE kits as well as allowing victims of sexual assault to monitor the status of their kit throughout the criminal justice process.

SAFE Kit Handling in Missouri

Modern SAFE kits in Missouri contain eight swabs used to collect DNA from various locations on the victim's body, envelopes for fingernail and hair samples, a bag for the victim's underwear, a report for the labs to use and a set of instructions for collecting evidence. Future kits will include a card the victim will be given at the hospital following the examination to access the SAFETrack system. Each SAFE kit has a unique barcode number designed to assist in tracking kits within the SAFETrack system. In Missouri, the Missouri State Highway Patrol (MSHP) crime lab purchases and distributes SAFE kits to entities that might need them for evidence collection. Largely, these entities are hospitals or other healthcare providers where victims of sexual assault go to have evidence collected in a SAFE kit. Law enforcement agencies and prisons sometimes directly receive SAFE kits for use in an emergency.

Once a SAFE kit is used to collect evidence, the victim decides whether to complete a police report initiating a criminal investigation. When a victim completes a police report and thereby consents to participation in the criminal justice system, the SAFE kit is referred to as a "reported" kit. The local law enforcement agency investigating the crime will then retrieve the kit from the collecting entity and submit the kit to the crime lab for testing. When a victim elects not to file a police report at the time of evidence collection, the kit is referred to as an "unreported" kit.

Inventory SAFE Kit Definitions

Reported: The victim has agreed to participate in the criminal justice system by filing a police report and initiating a criminal investigation.

Unreported: The victim has not agreed to participate in the criminal justice system and has not filed a police report. It is a national best practice to not test unreported SAFE kits in keeping with victims' wishes.

Law enforcement have no legal obligation to pick up unreported kits from the collecting entity. In Missouri, it was common practice for an unreported kit to remain at the collecting entity until the victim decided to file a police report or the kit was destroyed. In 2020, the Missouri General Assembly provided an alternative optional storage location for unreported kits. Unreported kits can be sent to Central Repository by hospitals or law enforcement to be maintained for a period of five years, or five years after the 18th birthday of the victim, to provide an opportunity to change their mind about participation in the criminal justice system. After the five year period, if no further contact is made, the MSHP may dispose of the unreported kit in accordance with law.

The next step in the SAFE kit lifecycle is for law enforcement to submit the kit to a forensic lab for examination. While Kansas City, St. Charles County, St. Louis County and St. Louis City have dedicated labs, most law enforcement agencies in the state use the MSHP crime lab for DNA testing. Labs typically return SAFE kits to the law enforcement agency that submitted the kit once testing is complete. Kits will often remain at the law enforcement agency until a criminal case is adjudicated or a judicial order of destruction is lawfully obtained. The current retention period for sexual assault kits in Missouri is 30 years unless the case is adjudicated.

The SAFETrack system allows the victim to access online information to privately check the location of their SAFE kit. The kit should be entered into the system by the medical provider during the examination. The system will show when the kit has been transferred to law enforcement and the lab for testing or returned to law enforcement following testing. Missouri law mandates stakeholders who possess SAFE kits to enter information about new sexual assault kits into the system. The training of the SAFETTrack system among stakeholders is ongoing.

Inventory Process

Inventory process planning began in the middle of October 2020 upon receipt of the 2020 SAKI grant award. A supplemental survey was sent to law enforcement agencies and hospitals to ascertain their current assigned personnel for a point of contact for the 2020 SAKI project. A comprehensive list of law enforcement agencies and hospitals complete with a primary point of contact, telephone number, fax number, and e-mail address was developed. The AGO divided the inventory territory into six geographic sections A – F. See Figure 1 for a map of these regions.

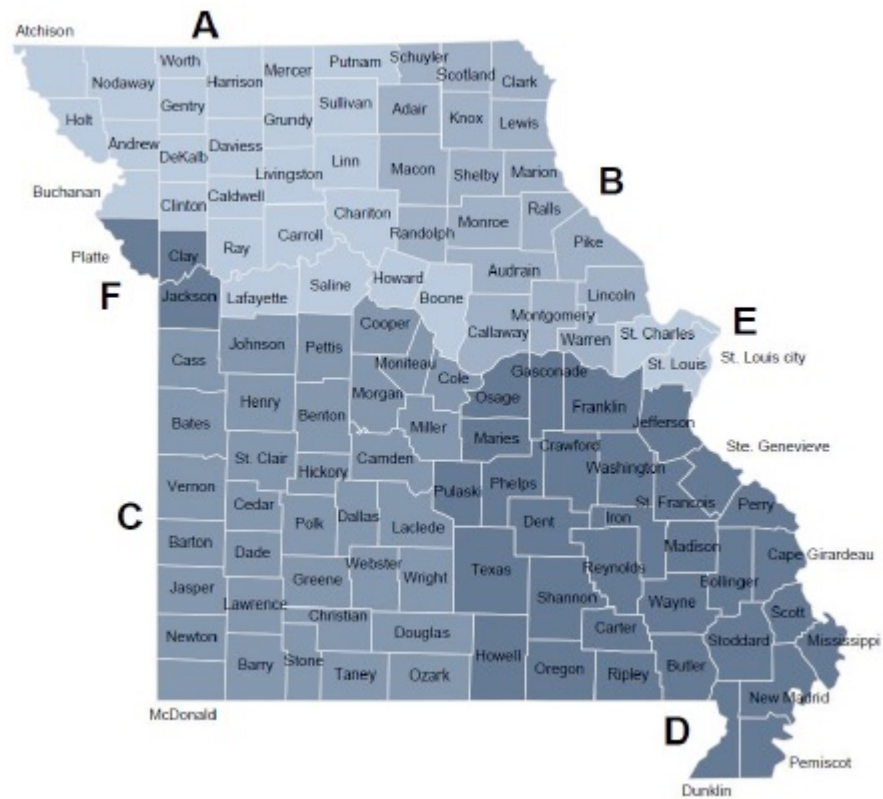

Figure 1- Missouri Map with Inventory Regions A - F

In-Scope SAFE Kits

- Part I: Untested SAFE kits with evidence collected before April 30, 2018, the submission date of the AGO's grant application (2018 SAKI Grant)
- Part II: SAFE kits collected on or before December 31, 1997, before DNA testing was used in Missouri, that have been previously tested by a lab (2018 SAKI Grant)
- Part III: SAFE kits collected before April 16, 2020, the submission date of the AGO's grant application (2020 SAKI Grant)
- Part IV: SAFE kits collected on or after January 1, 1998, that have been previously tested by a lab (2020 SAKI Grant)
- SAFE kits located outside of Missouri for crimes that occurred in Missouri
- SAFE kits used to collect evidence for multiple crimes, at least one of which included a sexual component (e.g., kidnapping and sexual assault)

Out-of-Scope SAFE Kits

- SAFE kits located in Missouri, but used for out-of-state crimes
- SAFE kits used to investigate events without a sexual component (e.g., murder, suicide, wellness checks, or overdose deaths)
- SAFE kits for events inside of Missouri involving exclusively military personnel handled through military law

The AGO prepared an Inventory Analyst training workbook and developed a two-day training curriculum which provided instructions related to grant requirements and dialogue; instructions about the use of spreadsheets and forms; provision of computer, telephones and written guide materials; communication practice sessions; ethics and professional office procedures; and practical tips for success presented by former analysts.

Under the supervision of the SAFE Kit Initiative State Coordinator, assisted by the Inventory/Data Manager, the 2020 Grant inventory process commenced in February 2021 when the AGO hired seven grant-funded inventory analysts from different regions of Missouri. AGO analysts began the inventory by actively soliciting information from organizations that might possess SAFE kits. The nature of analysts' assignments varied by geography and organizations. Some analysts conducted daylong site visits to connect organization records with SAFE kits to complete the inventory for agencies that were unable to complete the inventory due to workload or staffing issues. All analysts provided guidance and the level of assistance needed by local agencies to record accurate inventory data. Analysts worked with organizations through written communication, telephone conversations, and site visits.

The onset of COVID with agency shutdowns, remote work arrangements, and personnel shortages caused a delay in the inventory process. Many other practical realities complicated data collection efforts. As an example, to preserve the chain of custody and the evidence itself, kits could not be opened. Since the exterior of SAFE kits in Missouri provide almost no information, this forced the organization to locate and connect

related documents such as police reports or hospital records. The records for these decades-old kits were sometimes lost, inaccessible or destroyed over time. Realities such as this mean that the information available for each kit sometimes varies significantly, even from the same organization.

As organizations began submitting inventory results to the AGO, staff reviewed the material for compliance and accuracy and coordinated with field analysts and organizations to resolve questions. When organizations were delayed in returning inventory information, the AGO conducted site visits to determine the level of support needed to complete their inventory. Once organizations' inventories were complete, they provided signed certifications of results to the AGO, including those organizations at which no kits were present. See Appendix G for an example of an inventory certification.

Once the final inventory results were received, AGO analysts began verification site visits to organizations reporting SAFE kits in their possession. These site visits provided the opportunity to understand organizations' property-handling procedures, discuss challenges and potential improvements to the inventory process, and place barcodes on inventoried kits.⁴ The hands-on nature of the barcode placement was invaluable in assisting organizations in reconciling discrepancies between their records and the reality of their storage facilities.

During the verification process, staff and analysts worked with organizations with no kits to report to ensure completeness. Analysts made random site visits to organizations reporting zero kits to verify inventories and better understand examples of successful SAFE kit processing procedures.

Throughout the inventory, AGO staff facilitated the transfer of reported SAFE kits from healthcare providers to appropriate law enforcement agencies and updated inventories accordingly. These coordinated transfers preserved the chain of custody and accuracy of the inventory while sometimes beginning the investigative process. The AGO staff also facilitated the transfer of unreported SAFE kits from healthcare providers and law enforcement to Central Repository if requested by the organization.

The 2020 inventory process was further impacted by the fact that untested sexual assault kits were submitted for testing before the formal certification of the inventory results to BJA. The AGO received 2.6 million dollars from the General Assembly to assist in the elimination of the sexual assault kit backlog. This resource was available from July 1, 2021 to June 30, 2022. Testing capacity increased from one to four DNA private labs through competitive bids sought by the Office of Administration Purchasing Division. As a practical matter, inventory numbers, the status of kits and the location of kits fluctuated daily. In accordance with BJA instructions, this formal report identifies the location of all kits within organizations during the inventory regardless of the current status of the kit. During FY22, due to the shared commitment of the General Assembly, many organizations eliminated untested, reported kits from their inventory achieving the main goal of the SAFE Kit Initiative. To honor the progress and hard work of those agencies, this report will also contain

⁴ In Missouri, the MSHP lab distributes all SAFE kits to healthcare providers. Since January 2018, the MSHP lab has placed barcodes on SAFE kits during the manufacturing process prior to distribution to hospitals in the state. The AGO coordinated with the MSHP lab to use barcodes compatible with the lab's existing barcode system for the tagging of inventoried kits produced before barcodes became standard. As the St. Louis and Kansas City labs have an independent barcode system, the AGO did not place barcodes on kits in these labs' possession.

data from the 2018 and 2020 inventories that reflect the number of tested kits and the number of kits eligible for testing that await shipment to the lab under the SAFE Kit Initiative. See the data contained in Appendix F.

The major difference between the 2018 and 2020 SAKI grant inventory is the expanded scope of the second grant with an emphasis on a different period of time and the scientific research required for previously tested kits. During the 2020 SAKI grant, BJA required a list of existing previously tested kits, in the possession of law enforcement, that were processed without the benefit of the most modern DNA testing technology.

The AGO SAFE Kit State Coordinator and the AGO DNA Consultant worked with all the crime laboratories in Missouri to coordinate the inventory process of determining the method of DNA testing on individual sexual assault kits reported as tested kits in the possession of organizations. The crime laboratories that do DNA testing are located around the State of Missouri and are operated by different government agencies:

- Missouri State Highway Patrol Crime Labs – State of Missouri
 - Jefferson City Lab
 - Springfield Lab
 - Cape Girardeau Lab
- Kansas City Police Department Crime Lab – City of Kansas City Missouri
- St. Louis Crime Lab – City of St. Louis Missouri
- St. Louis County Crime Lab – St. Louis County Missouri
- St. Charles County Crime Lab – St. Charles County Missouri

At the request of the SAFE Kit Initiative State Coordinator, the AGO DNA Consultant met with the Missouri Crime Laboratory Directors to discuss, from a technical perspective, the concepts of partially tested and unsubmitted sexual assault kits, and to engage all laboratories in the identification of these kits for the respective laboratories. Each laboratory in Missouri has its own Laboratory Information Management System (LIMS), data storage, report access requirements and reporting methods. Additionally, the laboratories have different Y screening protocols and Y screening implementation dates. Due to the vast differences between the laboratories, each Missouri laboratory or laboratory system conducted internal review of the kits and reports worked by or assigned to their laboratories and identified partially tested kits among all previously tested items and unsubmitted kits as defined by the SAKI solicitation. This process added months of time to the inventory analysis; however, all labs collaborated, provided the necessary DNA personnel and resources to this effort, and worked diligently to ensure kits were identified according to the expectations of the project.

AGO analysts worked through volumes of electronic and paper records provided by the various laboratories to match existing sexual assault kits, in the possession of law enforcement agencies, to the data. In addition to the process of identifying partially tested kits vs. kits tested with the most modern DNA technology, analysts reconciled inventory results by contacting hospitals and law enforcement to make inventory corrections, if necessary, and obtaining signed amended inventory certifications. These extra activities added to the inventory process and enhanced the accuracy of data reported for the certification of the statewide results to BJA.

Over the course of the inventory, AGO staff and analysts invested more than 6,583 work hours and travelled more than 31,765 miles. However, this inventory would not have been possible without the dedication of sexual assault nurse examiners (SANEs), hospital staff, victim advocates, evidence managers, law enforcement investigators, and crime lab personnel across the State of Missouri. The professionalism shown by these personnel reflect their dedication to the communities they serve and their desire to improve service to victims of sexual assault. Partner stakeholders put in countless hours of preparation, organization, data entry, and cold case research. Most organizations were required to take personnel away from other duties to fulfill inventory tasks. Many SANEs and law enforcements personnel worked weekends, holidays, and overtime to meet inventory requirements. Some organizations used the inventory as an opportunity to review and amend their SAFE kit processing procedures by sending kits for testing more rapidly; storing the kits separately in evidence lockers; utilizing the optional Central Repository for unreported, untested kits; and auditing inventories to prevent cases from being forgotten or left unresolved. The AGO thanks these partners for ensuring a successful 2020 statewide inventory.

Inventory Results

The SAFE Kit Initiative 2020 Inventory included responses from 599 law enforcement agencies and 126 healthcare providers. In total, analysts located 12,182 in-scope SAFE kits. Law enforcement agencies held 11,941 (98.2%) kits and healthcare providers held 241 (1.98%) kits.

The breakdown of SAFE kit by type in law enforcement agencies is 1,408 untested, reported kits; 656 untested, unreported kits; previously tested: 6,234 partially tested kits and 3,643 fully tested kits. The breakdown of SAFE kit type in hospitals is 128 untested, reported kits and 113 untested, unreported kits. Hospitals do not possess tested kits. All previously tested kits were considered reported since they were submitted for lab testing.

The distribution of kits by date of assault can be seen in [Appendix C: Assault Distribution by Period](#). The oldest kit in inventory dated back to 1979, and the lower numbers in 2020 likely reflect the grant cut-off date of April 16, 2020 for the inventory project. While there was a relatively constant distribution of kits by year throughout the 1990s, most of the kits inventoried were from the last 10 years, with a sharp increase in 2018 and 2019. The noted increase in 2018 and 2019 may be attributed to legislative changes that have improved the handling of kits and the renewed focus on sexual assault cases within the State of Missouri. Information on the date of assault was available for only 88.4% of kits.

Over 8,000 kits (67%) were collected from female victims, 507 kits (4%) were collected from male victims, and the remaining 3,534 kits had an unknown sex (29%). Female victims have a small spike at ages 3 to 4 and a large spike beginning at 14 through 17, while male victims spike between ages 3 and 5 with a smaller spike at age 18, possibly indicating a reduced likelihood for reporting at older ages. See [Appendix D: 2020 Inventory Results](#) for victim demographics. See [Appendix E: 2020 Inventory Data Table](#) for a listing of all organizations covered in the 2020 SAFE Kit Initiative inventory.

When the 2018 grant inventory and 2020 grant inventory are compared, coupled with the thousands and thousands of hours dedicated to this initiative by AGO staff and stakeholders, the results are noticeable and impressive:

- **82.3% of Missouri Law Enforcement Agencies Report No SAFE Kit Backlog.** 493 Missouri law enforcement agencies of the 599 reporting departments in the 2020 inventory reported zero untested SAFE kits or have eliminated their previously existing backlog. (See Appendix F. for details.)
- **78% Drop in Number of SAFE Kits Held by Hospitals and Healthcare Statewide.** The reduction of kits held by healthcare facilities moved from a high of 1,089 kits statewide in 2018 to 241 kits statewide in 2020. This reduction in untested kits within healthcare facilities is due to efforts to move kits into law enforcement agencies for investigation; the use of the optional Central Repository to store untested, unreported sexual assault kits; the recent introduction of the electronic evidence tracking system; and the dedication of SANE nurses and hospitals to eliminate backlogged kits from their facility.
- **70% of the Statewide Reported, Untested SAFE Kits Have Been Tested.** When the number of untested, reported kits held in law enforcement agencies statewide in the 2018 inventory and 2020 inventory are combined, the total number of kits is 5,277. The testing resources provided by state and federal funding sources account for the DNA testing of 3,478 reported sexual assault kits prior to this report. The City of Springfield, Missouri, tested 119 kits with municipal funds and adjustments were made for 65 other kits tested by other labs and kits determined not to be in scope or not to be eligible for testing by judicial orders, contamination, or damage. The total adjusted number of untested, reported sexual kits awaiting testing using 2020 SAKI grant funds is 1,615. The number of kits currently awaiting testing represents just 30% of the total of reported, untested kits statewide. It is anticipated that an additional 1,000 sexual assault kits or more will be tested within the next 14 months. See Appendix F for details.

Next Steps

Testing

During the AGO's FY22 DNA Sexual Assault Kit Project (which used \$2.6 million in funding appropriated by the Missouri State Legislature), 1,799 SAFE Kits were sent to private labs for DNA testing. 595 of the 1,799 untested, reported kits tested with state funds were identified during the 2020 SAFE Kit Initiative Inventory. These kits were sent to private DNA labs for testing with the use of the FY22 state funds before the conclusion of the inventory process. The technical review of the 1,799 kits tested with state funds will be paid for using the 2020 SAKI grant. To ensure funds are available to pay for the technical review of all SAFE kits tested with state funds, the AGO estimates that existing 2020 grant funds will allow 1,000 additional inventoried SAFE kits to be tested during this grant period.

With the completion of the inventory of untested SAFE kits, efforts to test the remaining kits from the 2020 inventory has begun. To prevent backlogged kits from overwhelming the capacity of the MSHP crime lab and hindering the testing of contemporary kits, two or more private forensic laboratories selected through competitive bidding or approved contractual work with public institutions will test Missouri's backlog. Three third-party labs will verify the primary lab's work and then the MSHP crime lab will review results for upload to CODIS. Regional shipping events to send sexual assault kits to the private labs are ongoing and are expected to be completed by early October, 2022.

The AGO believes that all reported SAFE kits should be tested to provide every opportunity to bring predators to justice and to honor victims' courage in coming forward. Additional funds will be needed to test all reported kits; therefore, the AGO has applied for the 2022 SAKI Grant, which will be announced in October 2022, if awarded. In keeping with national best practices⁵ and the victim's wishes, the AGO believes that unreported SAFE kits should not be tested. Victims' safety and autonomy must remain a priority as Missouri works to address the SAFE kit backlog.

CODIS Upload

As kit testing is completed, resulting DNA profiles will be forwarded to the MSHP Crime Lab to determine CODIS eligibility. To be eligible for upload to CODIS, a DNA profile must accompany documentation that:

- 1) A crime has been committed,
- 2) The DNA sample was recovered from the crime scene and is attributed to the putative perpetrator, and
- 3) Elimination samples (e.g. for consensual partners) have been requested, if applicable.⁶

As DNA profiles are uploaded to CODIS, they will be compared against existing DNA profiles in the database to identify potential matches. Uploading DNA profiles to CODIS helps law enforcement connect cases and identify unknown offenders. While a criminal case may not hinge on the identity of an offender (i.e. when consent is the primary question), uploading DNA profiles from these SAFE kits is still vital. While uploading DNA profiles for unknown offenders may lead to the identification of a suspect, DNA profiles for known offenders may match previously uploaded profiles from unknown offenders, reigniting cold cases.

Since the beginning of the SAFE Kit Initiative in Missouri the AGO has received the following testing results from the kits tested:

- 38% are CODIS Upload Eligible
- 27% are not CODIS Eligible – which means the developed DNA profile matches the victim or has inconclusive results
- 35% are Negative – which means that no DNA was detected

⁵ (Office on Violence Against Women, 2017)

⁶ Federal Bureau of Investigation Laboratory, 2019)

From the 38% uploaded into CODIS the AGO has received the following number of hits:

- 249 CODIS Hits from the 2018 SAFE Kit Initiative Inventory and
- 5 CODIS Hits from the 2020 SAFE Kit Initiative Inventory

Investigation and Prosecutorial Follow Up

As CODIS hits to -identified offenders are received, the AGO works with its law enforcement partners to prepare investigative resources to forward to local jurisdictions. The AGO has dedicated a cold case investigator and stands ready to assist local law enforcement and prosecutors as requested.

Since the beginning of the SAFE Kit Initiative in Missouri the AGO has received information about the following investigative and court action on cases that have been tested with grant funds:

- 1 conviction by guilty plea
- 4 cases set for trial
- 2 cases with warrant for arrest issued

Disclaimer

This project was supported by Grant No. 2020-AK-BX-0027 awarded by the Bureau of Justice Assistance. The Bureau of Justice Assistance is a component of the Department of Justice's Office of Justice Programs, which also includes the Bureau of Justice Statistics, the National Institute of Justice, the Office of Juvenile Justice and Delinquency Prevention, the Office of Victims of Crime, and the SMART Office. Points of view or opinions in the document are those of the author and do not necessarily represent the official position or policies of the U. S. Department of Justice.

Appendices

Appendix A: Acronyms

AGO:	Attorney General's Office (State of Missouri)
BJA:	Bureau of Justice Assistance
DOJ:	Department of Justice
DPS:	Department of Public Safety (State of Missouri)
ETS:	Evidence Tracking System
LIMS:	Laboratory Information Management Systems
MDWG:	Multi-Disciplinary Working Group
MSHP:	Missouri State Highway Patrol
SAFE:	Sexual Assault Forensic Evidence
SAKI:	Sexual Assault Kit Initiative
SANE:	Sexual Assault Nurse Examiner
ViCAP:	Violent Criminal Apprehension Program

Appendix B: Definitions

Anonymous kit: A SAFE kit collected from a survivor that has consented to participate in the criminal justice process but wishes to remain anonymous.

Central Repository: The optional storage location for untested, unreported sexual assault kits located in Springfield, Missouri under the control of the Missouri State Highway Patrol created by statutory authority in 2020.

Combined DNA Index System (CODIS): A national database of DNA profiles from both known and unknown offenders and arrestees.

Evidence Tracking System (ETS): A standardized electronic system that allows healthcare providers, law enforcement agencies, advocates, testing labs and survivors to monitor the progress of the SAFE kit from collection to final disposition.

Multi-Disciplinary Working Group (MDWG): A collection of volunteer community stakeholders and practitioners that assist in the implementation of the SAKI grant. Members include representatives from healthcare organizations, SANE nurses, medical professionals, law enforcement personnel, testing laboratories, victim advocates and service providers, prosecutors, defense counsel, victims or interested citizens.

Part I (Untested): Refers to untested SAFE kits with evidence collected before April 30, 2018, the cut-off date determined by the application submission date of the current grant.

Part II (Previously Tested): Refers to previously tested SAFE kits with evidence collected on or before December 31, 1997, that have not been tested with the benefit of Y-STR DNA testing. The date reflects the end of the period in which Missouri did not use DNA testing.

Part III (Untested): Untested sexual assault kits in the possession of law enforcement, hospitals and ancillary organizations with evidence collected from April 29, 2018 - April 16, 2020, or untested sexual assault kits in the possession of law enforcement, hospitals and ancillary organizations with evidence collected prior to April 29, 2018, omitted from the 2018 inventory.

Part IV (Previously Tested): Tested sexual assault kits in the possession of law enforcement with evidence collected from January 1, 1998 - April 16, 2020 or tested sexual assault kits in the possession of law enforcement with evidence collected prior to January 1, 1998 omitted from the 2018 inventory.

Reported kit: A SAFE kit collected from a survivor who has agreed to participate in the criminal justice system by filing a police report and initiating a criminal investigation.

SAFE Kit Initiative: The name of the statewide Missouri program within the Missouri Attorney General's Office dedicated to the elimination of the backlog of untested, reported sexual assault kits in the state and implementation federal grants received from the Sexual Assault Kit Initiative (SAKI) within the Bureau of Justice Assistance and other resources.

SAFETrack: The name of the evidence tracking system developed for the State of Missouri that allows healthcare providers, law enforcement agencies, advocates, testing labs and survivors to monitor the progress of the SAFE kit from collection to final disposition.

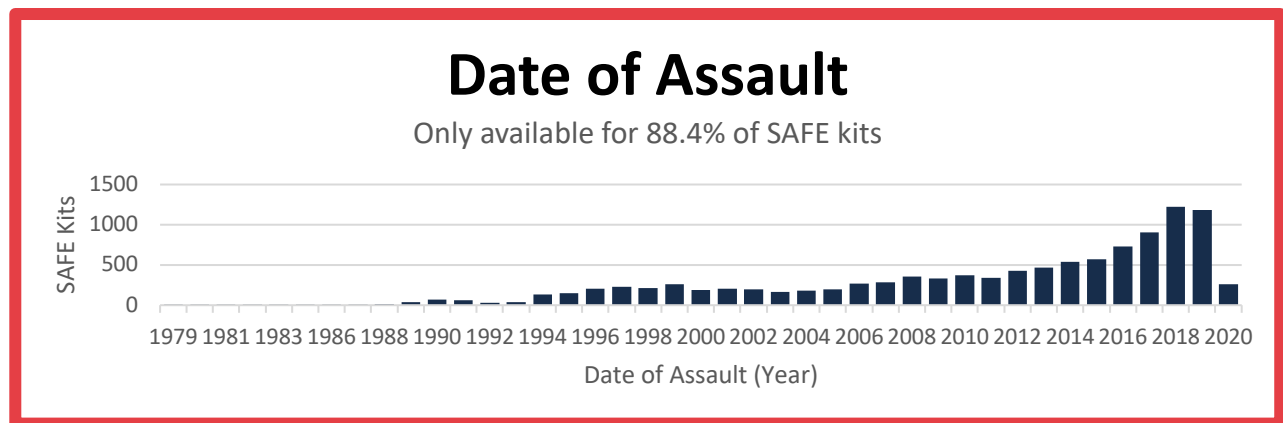

Sexual Assault Kit Initiative (SAKI): The name of the federal grant program within the Bureau of Justice Assistance that provides federal grants to local jurisdictions and state programs to support multidisciplinary community response teams engaged in the comprehensive reform of jurisdictions approaches to sexual assault cases resulting from evidence found in previously unsubmitted sexual assault kits.

Unreported kit: A SAFE kit collected from a victim who has not agreed to participate in the criminal justice system by filing a police report and initiating a criminal investigation.

Violent Criminal Apprehension Program (ViCAP): A unit of the United States Federal Bureau of Investigation responsible for the analysis of serial violent and sexual crimes, organizationally situated with the Critical Incident Response Group's (CIRG) National Center for the Analysis of Violent Crime (NCVAC).

Y-STR Testing: An alternative to Short Tandem Repeat (STR) testing that is suitable for testing SAFE kits because it can detect low levels of male DNA present.

Appendix C: Assault Distribution by Period

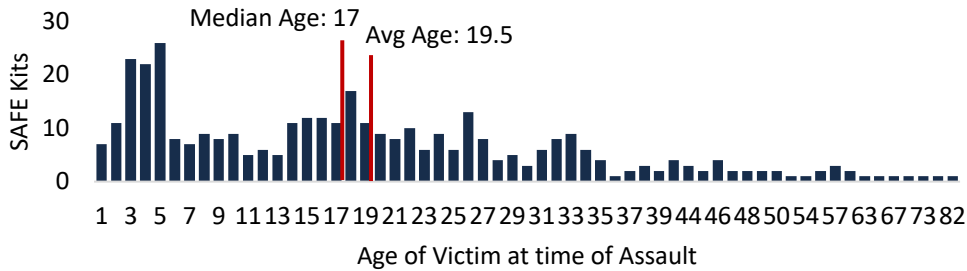

Appendix D: 2020 Inventory Results

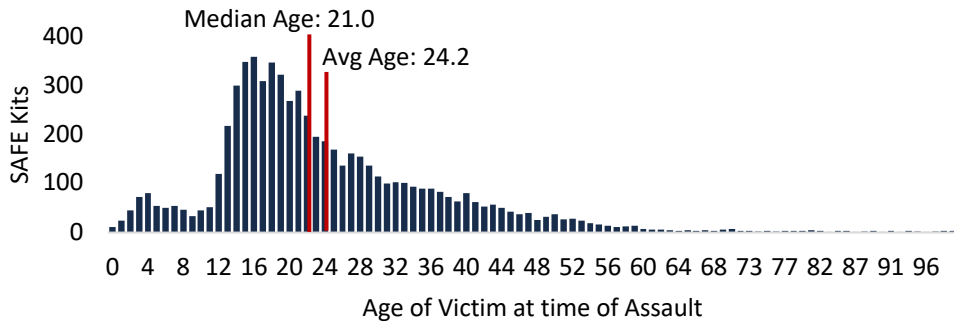

Male Victim Age at Assault

Only available for 84.8% of SAFE kits

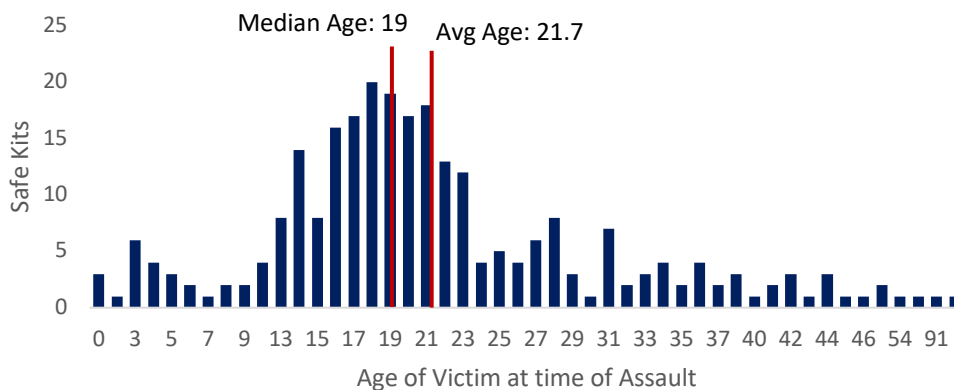

Female Victim Age at Assault

Only available for 84.8% of SAFE kits

Unknown Sex Victim Age at Assault

Victim Sex

Appendix G Inventory Certification Form

MISSOURI ATTORNEY GENERAL

ERIC SCHMITT

Missouri Sexual Assault Forensic Evidence (SAFE) Kit Initiative Inventory Certification

Department/Agency

County

SAFE KIT Inventory Count: Enter the number of kits in the boxes below:

Number of **Untested** Kits

Number of **Tested** Kits

Based upon my personal knowledge, I confirm and certify that the above organization has researched its facilities and holding and located the number of SAFE kits specified above which fall within the scope of the SAFE Kit Initiative. I also certify the accuracy of the information in the corresponding inventory spreadsheet if applicable.
